

all 116 runs, $\dot{M} = 0.09\text{--}1.20\text{ N}\cdot\text{m/s}$ — no heave-damping correction

— dynamic inversion — image-superposition model

(a) levels

at the onset the balance is static:
173 vs 166 mN·m — but this is
the quantity the static check already gives

(b) attitude dependence
